Specimens

- A** Breast, Right, Right Breast 2:00 3cmfn (6cm mass), Coil Clip - Dr. P. Shah
B Lymph Node, Axillary, Right abnormal axillary lymph node, Vision Clip - Dr. P. Shah

Clinical Information

Diagnosis:
N63.10 - Mass of right breast, unspecified quadrant [ICD-10-CM]

Final Diagnosis

- A. Right breast, 2:00, 3 cm from nipple, 6 cm mass, coil clip, ultrasound-guided core biopsy:**
Invasive carcinoma of no [REDACTED]
Histologic grade: 3 (poorly differentiated); (3 for tubule formation, 3 for nuclear pleomorphism, and 3 for mitotic activity).
Tumor size: 15 mm on submitted cores.
Presence of associated DCIS/LCIS: Not identified.
Microcalcifications: Absent.
Lymph-vascular space extension: Not identified.
Hormone receptor and HER2 status: Pending. Addendum report to follow.
Cold ischemia time: <1 minute.
Overall formalin fixation time: 12-14 hours.
See comment.
- B. Right abnormal axillary lymph node, vision clip, ultrasound-guided core biopsy:**
Metastatic carcinoma.
Size of metastatic deposit: At least 14 mm.

Electronically signed by Abbie Lee Husman, MD on [REDACTED] at 0926 EDT

Comment

Clinical and radiographic correlation is recommended.

Case ID: [REDACTED]
Patient: [REDACTED]

Printing Department

Findings were emailed to Dr. Shah at 9:24 AM on [REDACTED]

Gross Description

A. Breast, Right.

Received in formalin labeled with the patient's proper identification and "right breast 2:00 3 cm FN (6 cm mass)," is a 1.7 x 0.4 x 0.2 cm aggregate of fibrofatty tissue fragments. The specimen is inked green and submitted entirely in cassette A1.

Time out of body: 8:48 AM September 2, 2025

Time placed in formalin: 848

Total time in formalin: 12 to 14 hours

B. Lymph Node, Axillary.

Received in formalin labeled with the patient's proper identification and "right abnormal axillary lymph node," is a 1.6 x 0.4 x 0.2 cm aggregate of fibrofatty tissue fragments. The specimen is inked yellow and submitted entirely in cassette B1.

Time out of body: 8:48 AM September 2, 2025

Time placed in formalin: 848

Total time in formalin: 12 to 14 hours SWB

Microscopic Description

A. The tissue is inked green, corresponding with the gross description. There is invasive carcinoma. The Nottingham histologic score is 3 for tubule formation, 3 for nuclear pleomorphism, and 3 for mitotic activity for an overall grade of 3.

No [REDACTED] seen.

B. The tissue is inked yellow, corresponding with the gross description. Sections show a lymph node involved by metastatic carcinoma. The metastatic deposit measures at least 14 mm.

Blocks for Additional Testing

A1
