UNILATERAL RIGHT DIGITAL DIAGNOSTIC MAMMOGRAM:
Comparison is made to exams dated: ultrasound and mammogram - PRISMA HEALTH PATEWOOD OUTPATIENT CENTER.
The breasts are heterogeneously dense, which may obscure small masses.

Unilateral mammogram was performed of the right breast post ultrasound guided biopsy of the mass located in the 2:00 position with COIL clip placement and post ultrasound guided biopsy of the abnormal lymph node located in the right axilla with VISION clip placement.

Post procedure imaging confirms good COIL clip placement with respect to the palpable mass seen mammographically and good VISION clip placement in an abnormal right axillary lymph node.

IMPRESSION: POST PROCEDURE MAMMOGRAM FOR MARKER PLACEMENT

AS ABOVE.

Electronically Signed By: Pavani Shah M.D.
 10:10:57

Mammogram BI-RADS: Post-Procedure Mammogram for Marker Placement
