DATE: 9:12 AM

EXAM: REVIEW OF SUBMITTED BREAST IMAGING:

BILATERAL MAMMOGRAM WITH TOMOSYNTHESIS September 30, 2025:

Technique: bilateral mammogram: tomosynthesis images were obtained.

BILATERAL COMPLETE BREAST ULTRASOUND September 30, 2025:

Technique: bilateral breast us: whole breast ultrasound was performed, including sonographic evaluation of all four quadrants and the retroareolar tissues.

RIGHT MAMMOGRAM WITH TOMOSYNTHESIS

Technique: right mammogram: tomosynthesis images were obtained.

RIGHT LIMITED BREAST ULTRASOUND

Technique: right breast us: limited breast ultrasound was performed.

CLINICAL HISTORY: Recently diagnosed right breast invasive ductal carcinoma (internal review pending) . Review of outside imaging requested.

COMPARISON(S): April 9, 2024, March 7, 2023, March 4, 2022

FINDINGS:

MAMMOGRAM:

BREAST DENSITY: Extremely dense, which lowers the sensitivity of mammography.

RIGHT BREAST:

* Subtle distortion in the anterior slightly upper, outer breast. The finding persists on diagnostic mammogram October 2, 2025, both on full 90 degree lateral and spot compression views.

* Queried asymmetry in the posterior right central/slightly outer breast only the CC view. This dissipates on spot compression views, and is not seen on the 90 degree lateral view, suggesting overlapping dense fibroglandular tissue.

LEFT BREAST:

No

ULTRASOUND:

Evaluation is limited as interpretation is based on automated whole breast images.

RIGHT BREAST:

* No breast automated ultrasound.

* On subsequent diagnostic ultrasound October 2, 2025, in the 9:00 axis, 4 cm from the nipple, is an irregular hypoechoic mass measuring 0.9 x 0.7 x 0.8 cm, corresponding to the distortion on mammography. This underwent stereotactic biopsy on October 8, 2025. Outside pathology revealed invasive ductal carcinoma (MSK internal pathology review pending).

* Postbiopsy mammographic images demonstrate a Tumark vision marker at the site of mammographic distortion on CC view, and along the anterior margin of the distortion on the 90 degree lateral view.

RIGHT AXILLA: Not imaged.

LEFT BREAST: No

LEFT AXILLA: Not imaged.

ADDITIONAL IMAGING RECOMMENDED: None.

IMPRESSION:
Biopsy-proven invasive ductal carcinoma (MSK pathology review pending) in the right 9:00 breast. Biopsy marker along the anterior aspect of the distortion on postbiopsy mammogram.

Electronically Signed By: PRIYA SHAH on 5:05 PM
