MAMMOGRAPHY FOLLOWING PROCEDURE - RIGHT

Order:

Impression

BI-RADS sonogram: Post procedure mammograms for marker placement

Ultrasound-guided radar reflector placement in the right breast with mammographic documentation of positioning.

Electronically Signed By: Mark Francescone on November 13, 2025 11:28 AM

I, Mark Francescone, have personally reviewed this report and concur with its findings and conclusions, as affirmed by my electronic signature.

Narrative

EXAMINATION:
ULTRASOUND-GUIDED RADAR REFLECTOR PLACEMENT IN THE RIGHT BREAST and RIGHT DIAGNOSTIC DIGITAL MAMMOGRAM

CLINICAL INFORMATION:
Ductal carcinoma in situ

COMPARISON:

TECHNIQUE:
INFORMED CONSENT: The risks, benefits, and alternatives were explained to the patient obtained. Following universal protocol, patient out" prior to the procedure.

OPERATORS: Dr. Francescone performed the entire procedure.

PREPARATION: Breast was cleansed with Betadine.

LOCAL ANESTHETIC: Lidocaine

NUMBER

TARGET: 1.6 cm mass at the 2 o'clock axis,2 cm from the nipple.

PROCEDURE: A 16-gauge needle containing the radar reflector (SCOUT Radar Localization Device, Merit Medical) was used to localize the target. Ultrasound scanning was utilized to confirm proper depth of the localization needle and the radar reflector was deployed. The patient in good condition.

RIGHT DIAGNOSTIC DIGITAL MAMMOGRAM:
CC and ML views were obtained using full-field digital technique following placement of the radar reflector.

FINDINGS:

Density: The breast is heterogeneously dense, which may obscure small masses.
Post-localization mammographic CC and ML views document the radar reflector to be positioned in the expected position. Annotated images were archived.

Exam End: 10:06
