Beyond the Hype: 4 Surprising Truths About AI in Clinical Summarization

The weight of clinical documentation has reached a breaking point, serving as a primary driver for the physician burnout epidemic. In response, the healthcare industry has looked toward Large Language Models (LLMs) as a "miracle" solution—a way to instantly distill sprawling patient histories, messy doctor-patient dialogues, and technical radiology reports into actionable insights.

However, as the initial wave of excitement settles, a more sobering reality is emerging from the research lab. By synthesizing findings from four
