US-Guided Breast Core Biopsy - Left

Important Information About Your Test Results

Results

Addendum

EXAM:
Pathology Results
25006788344; 25006788345

PATHOLOGY OUTCOME:
Malignant

PATHOLOGY RESULT:
A. Breast, left, 3:00 N6, ultrasound guided core biopsy: Invasive ductal carcinoma and atypical lobular hyperplasia (ALH).

Please see dedicated pathology report for the full assessment.

RECOMMENDATION:
Recommendation: Surgical Consultation
Side: Left
Follow-Up: Prompt follow up

COMMENTS:
The pathology results are concordant with the imaging findings. The results and recommendations were discussed with the patient. A secure Epic message was sent to referrer Dr. Kelly Greening.

Study Result

Narrative & Impression

EXAM:
Ultrasound guided core biopsy, Post procedure mammogram
25006788344; 25006788345

COMPARISON:
08/22/2025,

DESCRIPTION:
INDICATION: 81-year-old with screening detected left breast 3 o'clock axis 6 cm from the nipple mass, for which ultrasound-guided biopsy was recommended.

Following universal protocol, patient with a "time out" prior to the procedure. Preliminary ultrasound evaluation of the left breast with special attention to the area of concern, confirms the presence of a 1.1 cm mass at the 3 o'clock axis, 6 cm from the nipple.

Informed consent was obtained.

The patient [REDACTED] the lesion was localized with real-time sonography. The skin was cleansed and marked. A total of 5 mL 1% Lidocaine was used for local anesthesia. A lateral approach to the target was used. A 14-gauge needle, secured to a spring-loaded device, was advanced to the preselected target. A total of 5 biopsy specimens were obtained, with pre- and post-fire images documenting needle placement for each pass. Specimens were sent for pathologic analysis. A heart shaped biopsy clip was placed at the biopsy site.

Following the procedure, the wound was cleansed and compressed. Steri-strips and sterile gauze were applied and the patient [REDACTED] instructions.

Images from the procedure were sent to PACS.

Dr. Jill Gluskin was present during the entire procedure, performed the procedure and reviewed all pertinent imaging. There was minimal blood loss during the procedure.

The patient [REDACTED] in good condition.

PATHOLOGY STATUS:

Results pending

EXAM:

Post procedure mammogram

BREAST COMPOSITION:

Density: The breasts are heterogeneously dense, which may obscure small masses.

FINDINGS:

Post procedure mammogram demonstrates appropriate positioning of the heart shaped biopsy marker at the mammographic finding.

IMPRESSION:

Ultrasound-guided core biopsy of a left breast mass.

ASSESSMENT:

BI-RADS mammogram: Post procedure mammograms for marker placement

Electronically Signed By: Jill Gluskin on September 08, 2025 04:59 PM
