GENERAL SURGERY PATHOLOGY REPORT			
 ACUPATH LABORATORY	Specimen A		
	Preliminary Date	08/14/25	
28 South Terminal Drive Plainville, NY 11803 Tel: 1-888-ACUPATH Fax: 1-815-326-3452 www.acupath.com	Final Report Date	08/15/25	
Submitted: 1 vial-A		Report released on 08/15/2025 02:36 PM	
Accession: 3384119-2025 Obtained: 08/12/2025 Received: 08/12/2025 8:20 pm			
PHYSICIAN: YI S. CHEN, D.O., FACOS 136-20 38TH AVENUE, Suite: SUITE 6A Flushing, NY 11354 Acct # 4363-5527-1			
		(718) 951-4836 (718) 451-5785	Rta 1
PATIENT: XULI MA 05-08 103 ST FRESH MEADOWS, NY 11365 (917) 802-1253 DOB: 08/08/1977		Acct#: www Char/AC#1893595 Age: 48 Sex: Female Path# 56989132	

DIAGNOSIS

DIAGNOSIS

A ● RIGHT BREAST LESION, HIGH SUSPICION, 1.3x0.8CM AT 6.00, 4CMFN, SONOGRAM GUIDED CORE NEEDLE BIOPSY

INfiltrative ductal carcinoma, moderately differentiated

DIAGNOSIS: INVASIVE DUCTAL CARCINOMA, MODERATELY DIFFERENTIATED

Notes: Invasive carcinoma: Ductal, NOS.

Nottingham score: 6/9 (tubules 3, nuclear grade 2, mitoses 1).

Nottingham score: one (tubules 3, nuclear
invasive tumor measures at least 1.1 cm.

Ductal carcinoma in situ: Not identified.

Ductal carcinoma in situ: Not found.
Microcalcifications: Not identified.

Lymphovascular invasion: No definite lymphovascular invasion is identified.

Lymphovascular invasion: No definite lym
Uninvolved breast tissue: Unremarkable.

Uninvolved breast
Receptor studies:

Receptor studies:
ER 100%, strong staining.

ER 100%, strong staining.
PR 100%, strong staining.

PR 100%, strong staining.
Her-2 - 1+/negative. Molecular studies will be performed and reported separately

Her-2 - 1+/negative. Mole
Ki67 approximately 20%

Ki67 approximately 20%
E-cadherin is positive confirming ductal origin of tumor cells.

E-cadherin is positive confirming ductal origin of tumor. P63 shows staining pattern supporting the diagnosis.

Immunohistochemistry: ER, PR, HER2NEU, KI-67, P63, E-CADHERIN Blocks: 2-2, P63 Blocks: 1-2

Preliminary Reasons: ER, PR, HER2NEU, Ki-67, P63, E-CADHERIN

Immunophenotyping performed utilizing the PATHWAY and HER-2/neu (4B5) Rabbit Monoclonal Antibody with the Roche ultraView Universal DAB Detection System. Neoplastic tissue was fixed in 10% neutral buffered formalin for CONFIRM and Estrogen Receptor (ER) (SP1) Rabbit Monoclonal Primary Antibody with the Roche ultraView Universal DAB Detection System. Neoplastic tissue was fixed in 10% neutral buffered formalin for

CONFIRM and Estrogen Receptor (ER) (SP1) Rabbit Monoclonal Primary Antibody with the Roche streptavidin Universal DAB detection system.
Receptor (PR) (1E2) Rabbit Monoclonal Primary Antibody with the Roche streptavidin Universal DAB detection system.
 Recommended with the ASCO-CAP guideline recommendations for predictive marker testing in Breast Cancer.

Receptor (PR) (1E2) Rabbit Monoclonal Primary Antibody was used at a dilution of 1:1000. The total number of slides stained was a total of 6-12 hours. These variables satisfy the ASCO-CAP guideline recommendations for production of a reliable result. The use of a 1:1000 dilution of the antibody is preferred to avoid excessive decoloration and false-negative results. One hour of stain is preferable.

Prolonged cold ischemic time may result in antigenic degradation and false-negative results. Cold

HER2-1HC Scoring System (Breast):
HER2-1HC membrane staining that is complete, intense, and within $\geq 10\%$ of tumor cells.

3+ = Circumferential membrane staining (hs) is complete, intense, and within > 10% of tumor cells

2+ = Invasive breast cancer with weak to moderate membrane staining (open circles) within > 10% of tumor cells

1+ = Incomplete membrane staining that is faintly perceptible and without obscuring of the underlying cellular morphology.
0 = No staining is observed or membrane staining is incomplete and is faintly barely perceptible and without obscuring of the underlying cellular morphology.

HER-2/neu results were established according to the 2018 ASCO/CAP guidelines (from ASCO, 2018) and the 2018 CAP/ASCO guideline (from CAP, 2018). The 2018 ASCO/CAP guidelines (from ASCO, 2018) and the 2018 CAP/ASCO guideline (from CAP, 2018) are available at: <https://www.asco.org/2018-ascocap-guidelines-for-testing-and-reporting-her2-neu-in-breast-cancer>.
