HISTORIC MAMMOGRAM

Order:

Narrative

Patient:
ID:
Note: All result statuses are Final unless otherwise noted.

Tests: (1) MAMMO BILATERAL SC W/ TOMO (77067T)
MAMMOGRAM Result Below... 20250824000000
RESULT: BI-RADs 0 - Incomplete

PROCEDURE: BILATERAL DIGITAL MAMMOGRAM WITH TOMOSYNTHESIS

COMPARISON: US, BREAST ULTRASOUND (LEFT),
MG, MAMMO BILATERAL SC W/ TOMO,
MG, MAMMO BILATERAL SC W/ TOMO,

INDICATIONS: Screening. Family history of breast cancer in maternal cousin.

LAST CLINICAL BREAST EXAM:

TECHNIQUE: Digital CC and MLO views of both breasts with tomosynthesis are submitted for review. The study is interpreted with the use and aid of computer assisted diagnosis (CAD).

BREAST COMPOSITION: The breasts are heterogeneously dense, which may obscure small masses.

FINDINGS:
There is a new group of microcalcifications in the posterior upper-outer quadrant of the left breast spanning approximately 2.5 cm (3.5 cm superior to the nipple line, 6.5 cm lateral to the nipple line). A 1 cm nodule in the lower inner quadrant of the left breast is stable. The overlying skin and axillary tissue are within normal limits.

CONCLUSION:
1. New group of microcalcifications in the posterior upper-outer quadrant the left breast. Recommend magnification ML and exaggerated lateral CC views for further evaluation.
2. Stable left breast nodule, previously characterized as a fibroadenoma.

Dense breasts may obscure an underlying neoplasm. As required by New York state law, the patient informed of her dense breasts for the mammogram in writing.

RECOMMENDATIONS:
BI-RADS#0 - Need Additional Imaging Evaluation: Additional mammographic views required: LEFT BREAST
