

Mammo Screening W Tomosynthesis

Anatomical Region
Breast

Laterality
bilateral

Modality
Mammography

Impression
Negative

FINAL ASSESSMENT: BIRADS: Category 1 - Negative.

RECOMMENDATION: As long as there is no [REDACTED] patient [REDACTED]

The imaging department will send a letter written in lay language of the results to the patient [REDACTED]

This report was generated at Baptist Health Medical Center - Little Rock Breast Center

Narrative

Digital Mammo Screening W Tomosynthesis [REDACTED] 3:37 PM

COMPARISON:

Compared to: [REDACTED] Mammo Screening W Tomosynthesis, [REDACTED] Mammo Screening W Tomosynthesis, [REDACTED] Mammo Screening W Tomosynthesis, [REDACTED] Mammo Screening W Tomosynthesis, and [REDACTED] Mammo Screening W Tomosynthesis

FINDINGS:

Tomosynthesis was performed in each standard projection, with a two dimensional view reconstructed from each data set. Standard digital views of each breast reveal they are heterogeneously dense, which may obscure small masses. There is no [REDACTED] microcalcifications, or area of architectural distortion.

Tomosynthesis images were reviewed and show no [REDACTED]

Exam End: [REDACTED] 16:37

Last Resulted: [REDACTED] 16:45

Received From: Baptist Health Medical Center - Arkansas

Result Received: [REDACTED] 12:28
